## Press Release

### Mobile Web App Launched for Staff Presence Management

**30 July, 2012** - WhosOnLocation, the proven cloud-based people presence and safety software provider, today announced the release of mobiOnsite, an easy to use web-app enabling users to tag themselves on or off-site from their workplace.

**mobiOnsite** runs across all Android phones with OS 2.3 and above, iPhone, and Blackberry Torch. Receptionists and other people presence manager users will have full visibility into who is on-site and who is off-site through desktop browsers, allowing them to maintain real-time people presence lists for evacuation reporting without the need for employees to scan in or out, sign staff registers, or use tools like magneto whereabouts boards.

This enhanced offering, along with the recently released mobiEvac mobile app, extends WhosOnLocation's mobile strategy by providing the greatest flexibility for users to easily tag themselves on-site or off-site, and confirm their safe evacuation from the workplace anytime, from anywhere. With millions of people now working in environments demanding real-time information, ease of access, and availability on the go, the use and adoption of mobile applications for business purposes is no longer a nice to have but a necessary and valuable tool.

"Knowing whether our staff are on site during an emergency is of paramount importance to our business. For years a magnetic marker has been the only indicator as to who is on site. The new **mobiOnsite** web-app in conjunction with our WhosOnLocation visitor management system, provides an easy to use on-site indicator to give our reception and our colleagues visibility as to who is present.

The new **mobiOnsite** web-app allows us to easily update our on-site status directly on our smartphone's, we can even tag ourselves as off-site after we have left the office. Because it is so convenient our on-site lists are more likely to be accurate. We like the fact that **mobiOnsite** is not a big brother GPS tracking service that invades our privacy but a natural and convenient extension of the existing magnetic IN/OUT board, stored safely in the cloud for anyone to reference during an emergency" **Brent Seeney, I.S. Manager, INEX Independent Extrusions**

WhosOnLocation's mobile applications give receptionists and report managers the same visibility into their employee's presence on-site as they would from the desktop browser interface – allowing them to easily identify if a colleague is on-

site or off-site. WhosOnLocation customers have always been able to search, view, and update employee presence information for any employee using their desktop access but now employees can update their own status using their smartphone.
