Press Release

WolMobile for iOS and Android Released

20 January, 2015 - WhosOnLocation announces the release of WolMobile, a new app for iPhone and Android users. WolMobile allows users to tag their current Geolocation status, as well as tag themselves on-site into any building or location associated with their place of employment, anywhere in the world.

Users can:

1. Tag themselves on or offsite any location in their WhosOnLocation account, instantly updating that location's evacuation report.
2. Tag their current Geolocation, wherever they are in the world, giving real-time visibility to their employer of where they are.
3. Set WolMobile to follow their Geolocation, allowing their employer to track their position where user safety and security requires it.

WolMobile Works with any recent iPhone, Android, Windows, or other smartphone with a touch enabled interface as an HTML 5 web app from the user's mobile phone browser. Users can also get the WolMobile app in the iOS App Store or Android Google Play.

"When an employee's role requires them to work off-site and/or where the security and safety of the employee must be validated, or where a high level of integrity is required in evacuation reporting organizations have often struggled with deploying a cost effective solution whilst also having to invest in proprietary hardware" says Darren Whitaker-Barnett, CEO at WhosOnLocation.

"WolMobile is designed to address the growing demand for employers to demonstrate that they can account for all people in the event of an emergency. Health and Safety, Facilities, and Security managers can login from

their PC or tablet to view where their people are, in real-time. Furthermore, employees do not have to worry about their employer tracking their every move as users are in control. Users can decide where and when any Geolocation position is transmitted"
